

## swat hydrographs

Posted by mbleiwei - 2008/04/28 19:30

---

Greetings,

I do not seem to find the directions for creating a hydrograph for a SWAT simulation in AGWA 2.0. Is it doable or ?? For example, we use daily precipitation for three years and only the "yearly output" lights up. And, there appears to only be output for the total time of the simulation, not yearly.

Thanks,

Max

We haven't implemented any hydrography viewing at the moment. The daily and monthly output options will be enabled in the next release, but viewing results will still be based on average annual values. Additional viewing options are planned but haven't been finalized.

I guess my real problem right now is that the daily or monthly option for the "select output frequency" is not available in AGWA 2.0 -- are we doing something wrong?

Thanks,

Max

Whoops, sorry I never got back to you. No, you aren't doing anything wrong. The other output frequency options weren't implemented at the time of release, however they will be available at the next update (sometime this summer).

Hi Shea,

we went into the input files and changed the appropriate parameter and re-ran SWAT from the command line -- we could get daily output.

Thanks,

Max
